Wescorp Energy Unveils Solution To Locate, Track Oil-field Equipment

HOUSTON, Texas and CALGARY, Alberta (Monday, November 12, 2007) – Wescorp Energy Inc. (OTCBB: WSCE), an oil and gas operations solutions company, announced today the launch of Intelligent Field Resource Management (IFRM), a radio-frequency identification (RFID)-driven solution for industrial and oil-field equipment that answers the three most important questions those in oil and gas field operations and maintenance (O&M) have about this equipment: What do I have? When did I get it? Where is it?

“This is one more way Wescorp is providing solutions to reduce process cycle time and thus lower costs,” said Wescorp COO Scott Shemwell. “The more we can help our clients understand what they’ve got and how to get to it quickly, the more value they can derive from their O&M activities”

The IFRM solution is currently being tested at the bottom of the Gulf of Mexico and in arctic temperatures.

“We’re pulling together a full array of capabilities necessary for people to successfully manage oil and gas operations, whether it’s at the bottom of the ocean, the tropics, the arctic, or on a fleet of equipment or marine vessels,” Shemwell said.

Previously, those in O&M relied on bar codes or other inventory control methods for their heavy industrial material, consumables and equipment. However, none of these methods provided all the information needed—if they worked at all.

“The engineers in the field need to know more about their equipment than what its depreciation schedule is,” Shemwell said. “Our solution will tell them such things as exactly where that piece of equipment is, what kind of shape it’s in, whether it’s even functioning at any precise moment, if it needs to go back for a rebuild, etc.”

Shemwell added that a considerable amount of what the IFRM solution will tag is not specifically designed for a single job site.

“Equipment is often transferred to different departments or divisions within a company,” he said. “It may be loaned out to a job in the Gulf of Mexico and the next thing you know it has wound up in Newfoundland. How did it get there? This solution enables you to track its history.”

Wescorp CEO Doug Biles said IFRM’s “secret sauce” is Wescorp’s proprietary NAVIGATOR Process Management Services.

“All the information related to the tagged equipment is tied to NAVIGATOR and stored securely online where it is available for collaborative initiatives,” Biles said. “This means you can not only find the particular piece of machinery you’re looking for, but at the same time you can get the manual on it, the service record on it—anything about the item you want to know.”

Wescorp NAVIGATOR is a suite of process management services that enables Wescorp to reduce costs, save time and optimize field operations for its worldwide oil and gas clients.

About Wescorp

Wescorp Energy Inc. (www.wescorpenergy.com) is an oil and gas operations solutions company focused on commercializing technologies that overcome tough operations challenges facing oil and gas operators today. Wescorp combines its intellectual capital, oil and gas industry experience, best practices methodologies and its market offerings to deliver these solutions in a timely, economic and environmentally friendly manner.

Wescorp shares currently trade on the NASD.OTC Bulletin Board under the symbol "WSCE".
